KOOS MATLI PRIMARY SCHOOL

SYSTEM USER GUIDE

A desktop-oriented guide to the school website and role-based application

THUTO KE LESEDI – EDUCATION IS LIGHT

Prepared for Parents • Teachers • Administrators

Revised edition | November 2026

Contents

Section	Pages	Coverage
Introduction	3-5	Purpose, users, system components and navigation.
Getting started	6-12	Prerequisites, backend, app launch, language, onboarding and authentication.
Parent functionality	13-21	Dashboard, schedule, updates, children, academic progress, fees, profile and privacy.
Parent functionality	22-28	Dashboard, classes, class details, announcements, schedule, profile and permissions.
Parent functionality	29-38	Dashboard, users, applications, school and staff/class management, settings, links and security.
Troubleshooting	39-41	Login, connection and data issues, reporting a problem and support.

System information

The application supports English, Sepedi and Setswana. Teachers can view updates and create announcements for the appropriate audience. Access to system functions is based on each user's assigned role.

PAGE 03 - INTRODUCTION

System overview

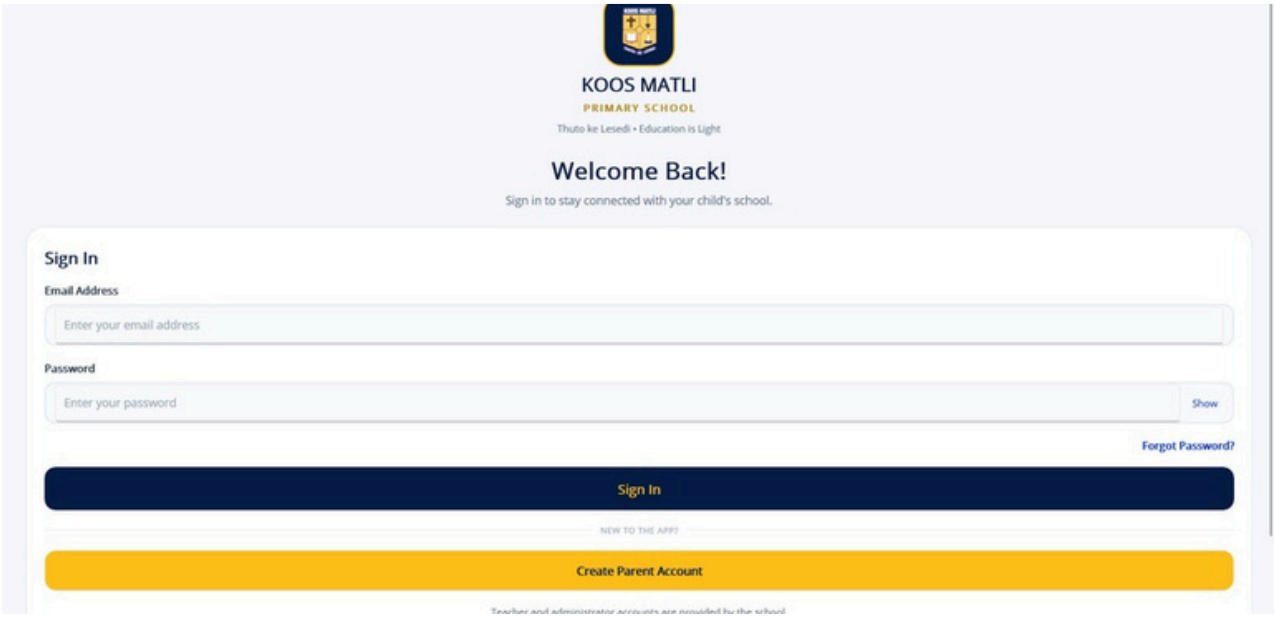

The Koos Matli Primary School Management System is a digital solution designed to support communication, information sharing and administrative processes at Koos Matli Primary School in Mamelodi, South Africa. It brings together a public-facing school website and a role-based mobile application.

- The school motto is Thuto ke Lesedi Education is Light.

- The website makes public school information easier to access.

- The mobile application provides different experiences for parents, teachers and administrators.

- The system aims to make school communication and access to information more organised.

PAGE 04 - INTRODUCTION

Purpose and intended users

This guide explains the main user journeys for the website and application. It is intended for parents, teachers and administrators who need to understand where to find the main areas of the system.

- Parents use the app to view linked children, schedules, announcements and relevant school information.
- Teachers use the app to access classes, schedules and updates, and can create announcements.
- Administrators use the app to manage users, applications, school information and administrative settings.
- The public website provides information to parents, prospective learners and the wider community.

PAGE 05 - INTRODUCTION

System components and navigation

PAGE 06 - GETTING STARTED

Before opening the application

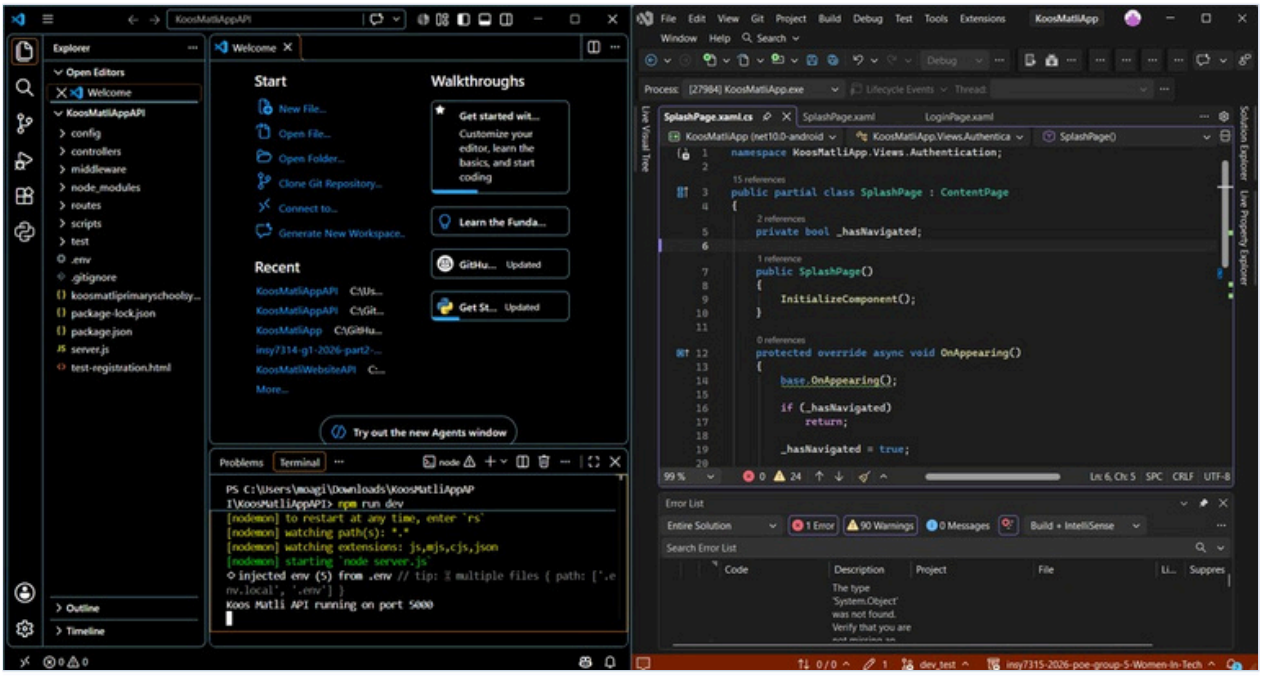

The project README describes a local testing and demonstration setup. In this setup, the backend API must be running before the mobile application is launched. Normal school users in a future deployment should receive an installed app and school-issued access instructions. application.

- For a project demonstration, prepare Visual Studio Code for the Node.js API and Visual Studio for the .NET MAUI

- Ensure the development computer has the required Node.js, npm, .NET SDK and MAUI workload installed.

- Have a test account for the role being demonstrated.

- Use fictional learner and parent records in screenshots and demonstrations.

PAGE 07 - GETTING STARTED

Starting the backend API

The backend provides the API endpoints used by the mobile application. Start it before running the app so that login and data requests can reach the server.

- Open the backend/API project folder in Visual Studio Code.

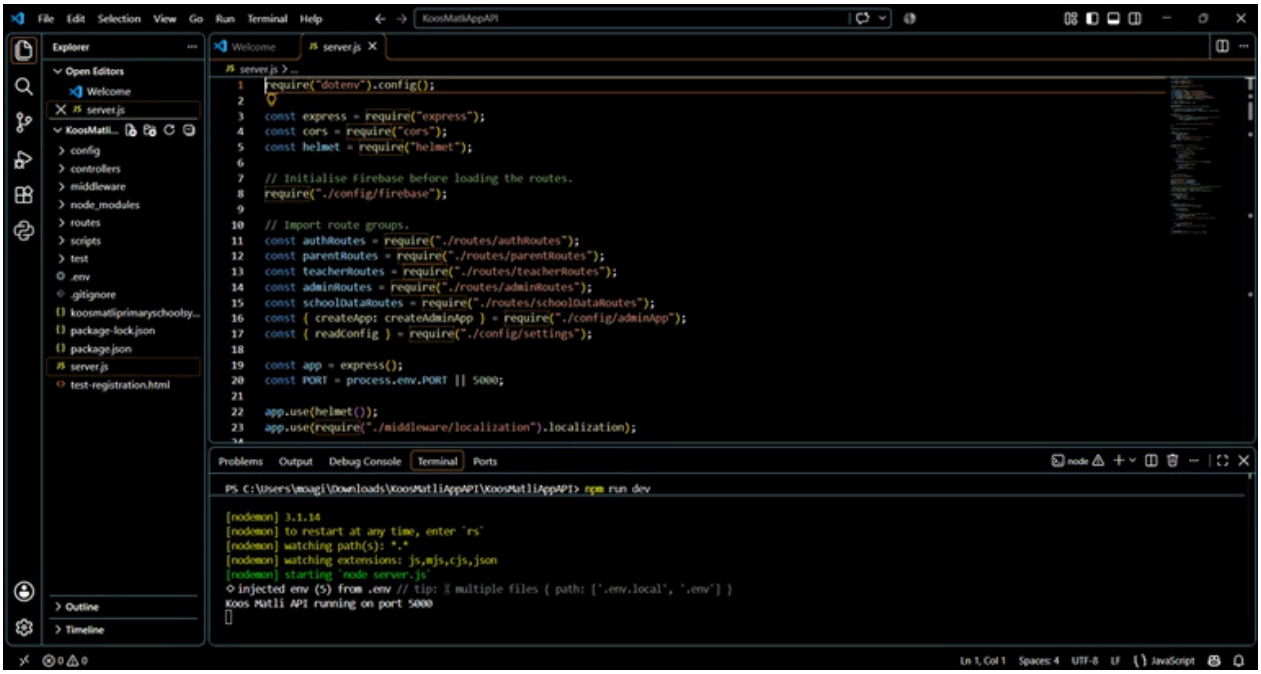

- Open Terminal, New Terminal and confirm that the terminal is in the API directory.

- Run npm install if the project dependencies have not yet been installed.

- Check that the required environment configuration is present. Never display or share secret values.

- Runthe startcommand defined in the project's package.json (for example, npm run dev or npm start only if that script

Backend API workspce

PAGE 08 - GETTING STARTED

Launching the mobile application

Once the API is running, open the .NET MAUI project in Visual Studio, restore dependencies and run the application on the selected target.

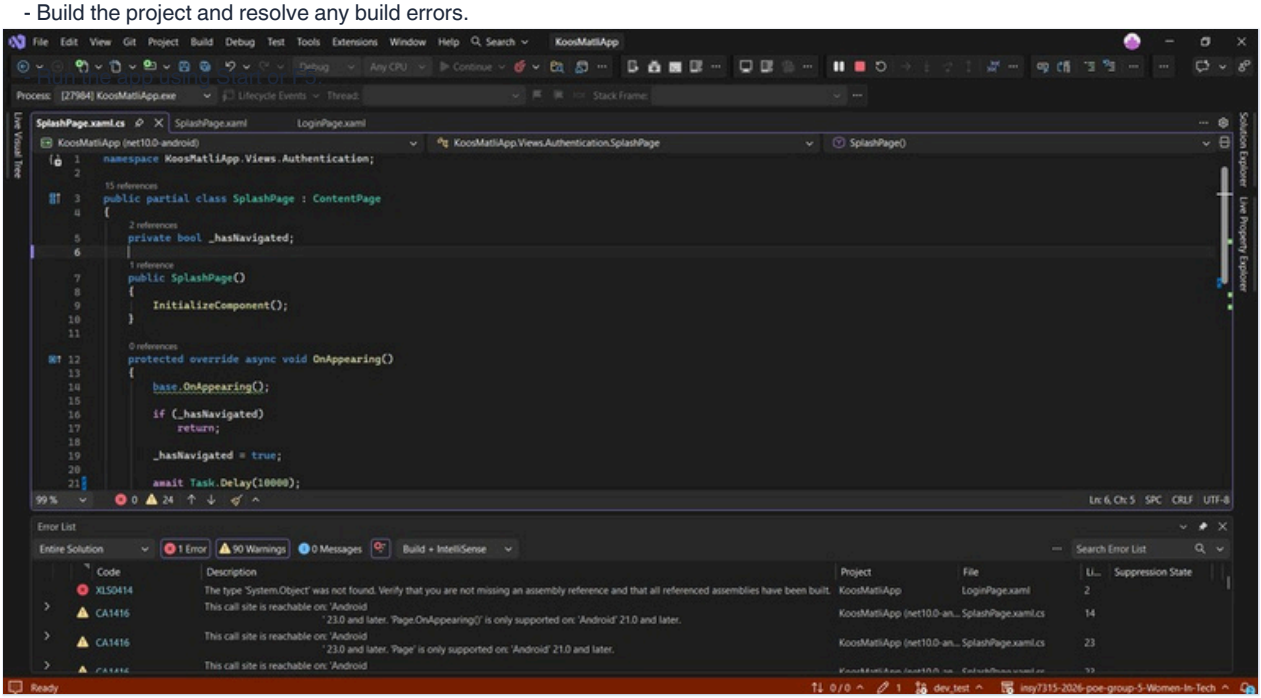

- Open the solution or MAUI project in Visual Studio.

- Allow NuGet package restoration to finish.

- Select the target device or emulator configured for the project.

- Confirm the API base address is appropriate for that target.

- Build the project and resolve any build errors.

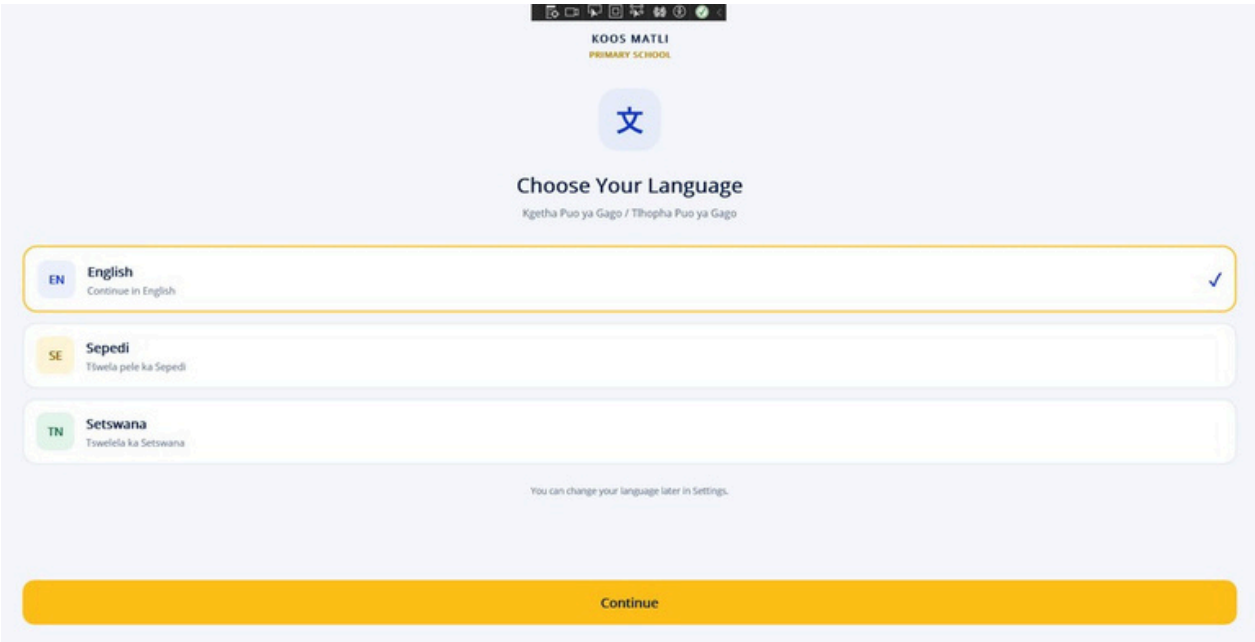

PAGE 09 - GETTING STARTED

Language selection

The application supports exactly three language options: English, Sepedi and Setswana. Select the preferred language during the language-selection stage of the onboarding/authentication flow.

- Open the app and wait for the splash screen to finish.
- On the language-selection screen, choose English, Sepedi or Setswana.
- Continue through the onboarding screens.
- If the language can also be changed later, use the language option under Settings.
- If a label remains in another language, report it to the project team.

PAGE 10 - GETTING STARTED

Splash screen and onboarding

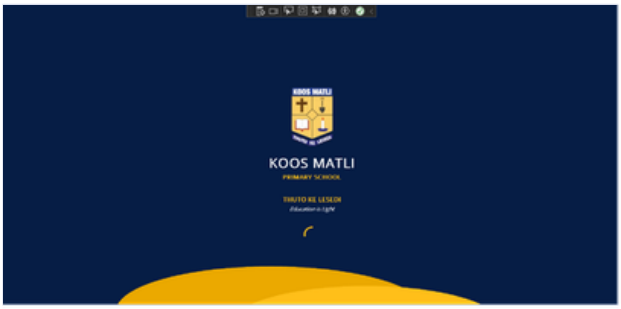

The splash screen introduces the Koos Matliidentity.The onboarding slides explain the main benefits highlighted in the staying connected, accessing timetables and school events, accessing important information and screen design saving data.

- Launch the application and allow the splash screen to complete.

- Read or swipe through each onboarding slide.

- Use Skip if the current build provides it and you want to move directly to authentication.

- Select Get Started on the final slide to continue.

PAGE 11 - GETTING STARTED

Login, registration and password recovery

The authentication area provides access to the system. Parents can register through the application. Teacher and administrator accounts are managed by authorised school personnel.

- On the login screen, enter the account details supplied or registered for you.

- Parents who do not yet have an account can choose Sign Up and complete the registration form.

- Teachers and administrators should request accounts from authorised school personnel.

- Use Forgot Password if you need to follow the password recovery process shown by the application.

- Never share your password, verification code or reset link.

PAGE 12 - GETTING STARTED

Selecting the correct role

After successful authentication, the application should display the interface associated with the account's assigned role. Role-based access is intended to keep each user within the areas relevant to their responsibilities.

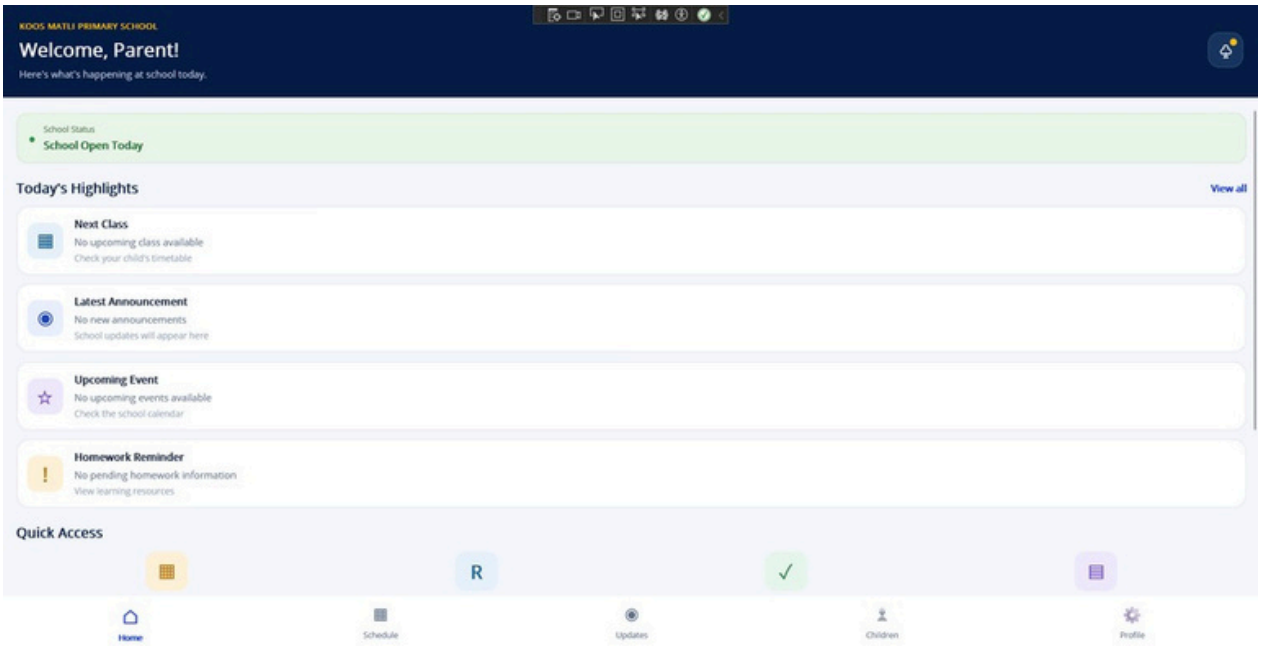

- Parents should see the Parent navigation.
- Teachers should see the Teacher navigation.
- Administrators should see the Administrator navigation.
- If the wrong dashboard appears, sign out and ask an administrator to verify the account role.
- Do not use another person's account to access a different role.

PAGE 13 - PARENT FUNCTIONALITY

Parent dashboard

The Parent Dashboard is the home page for parent users. The screen design calls this screen Home / School Pulse and shows school status, highlights, latest announcements, upcoming events, important notices and quick access areas.

- Sign in with the parent account.
- The app opens on the Parent Dashboard.
- Review the school pulse and highlights shown on the page.
- Check recent announcements and upcoming events.
- Use the bottom navigation bar to open Schedule, Updates, Children or Profile.

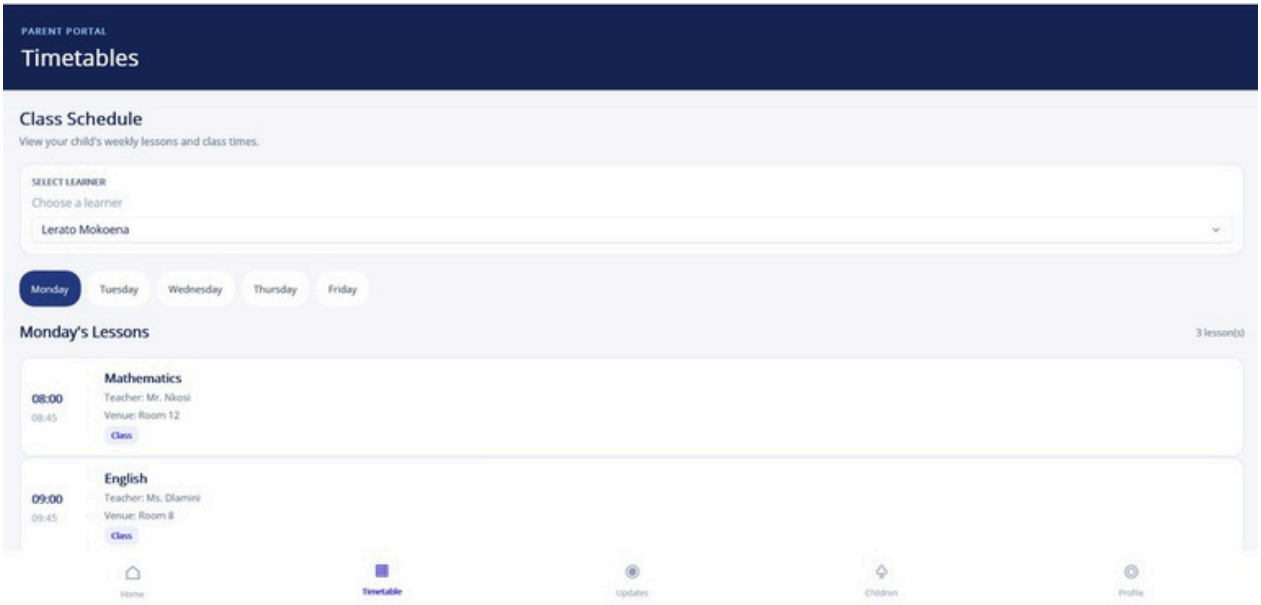

PAGE 14 - PARENT FUNCTIONALITY

Parent schedule

The Schedule page gives parents a central place to view relevant timetables, calendar dates and school events. The wireframe shows tabs for Timetable, Calendar and Events.

- Select Schedule from the bottom navigation.
- Review the timetable or calendar information shown.
- Use the available tabs to switch between timetable, calendar and events if present.
- Check dates and times carefully, especially when planning around school activities.
- If information is missing or appears outdated, contact the school.

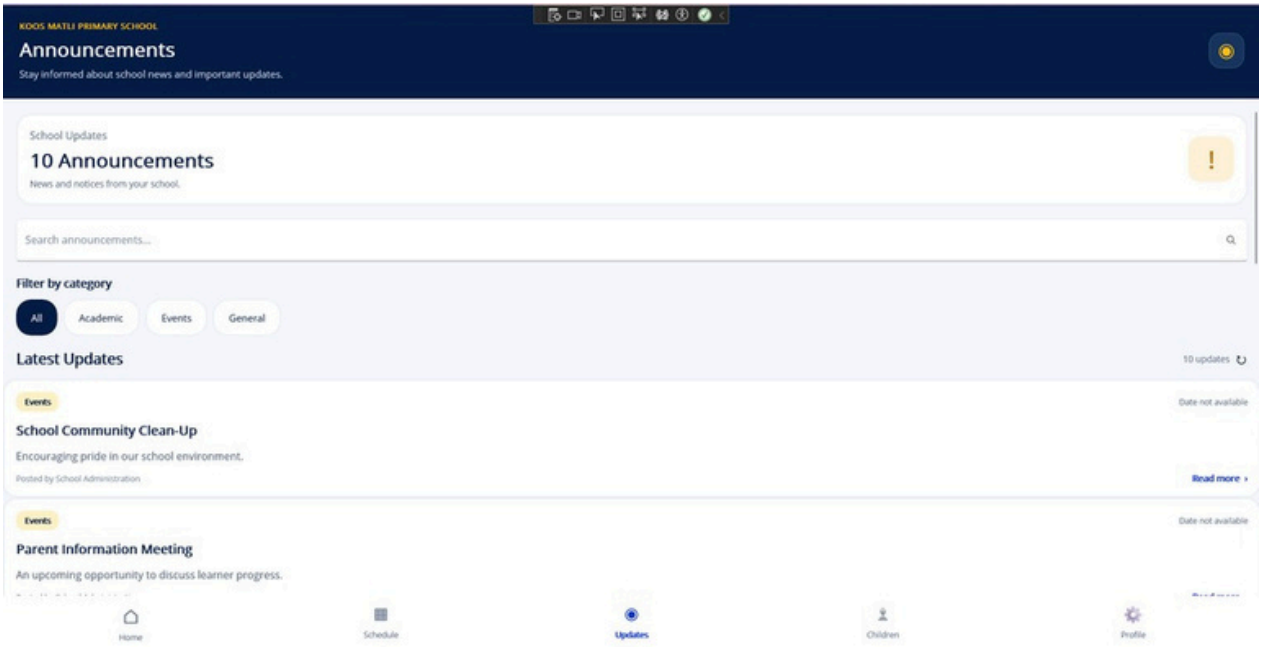

PAGE 15 - PARENT FUNCTIONALITY

Parent updates and announcements

The Updates page displays school communications such as announcements, reminders and homework-related notices where provided by the current build. The wireframe shows category tabs such as All, Announcements and Homework.

- Select Updates from the bottom navigation.
- Browse the notices available to the parent account.
- Use category tabs if they are available to filter the list.
- Open a notice when you need to read its full message.
- Check the date and any action or deadline included in the notice.

PAGE 16 - PARENT FUNCTIONALITY

My children

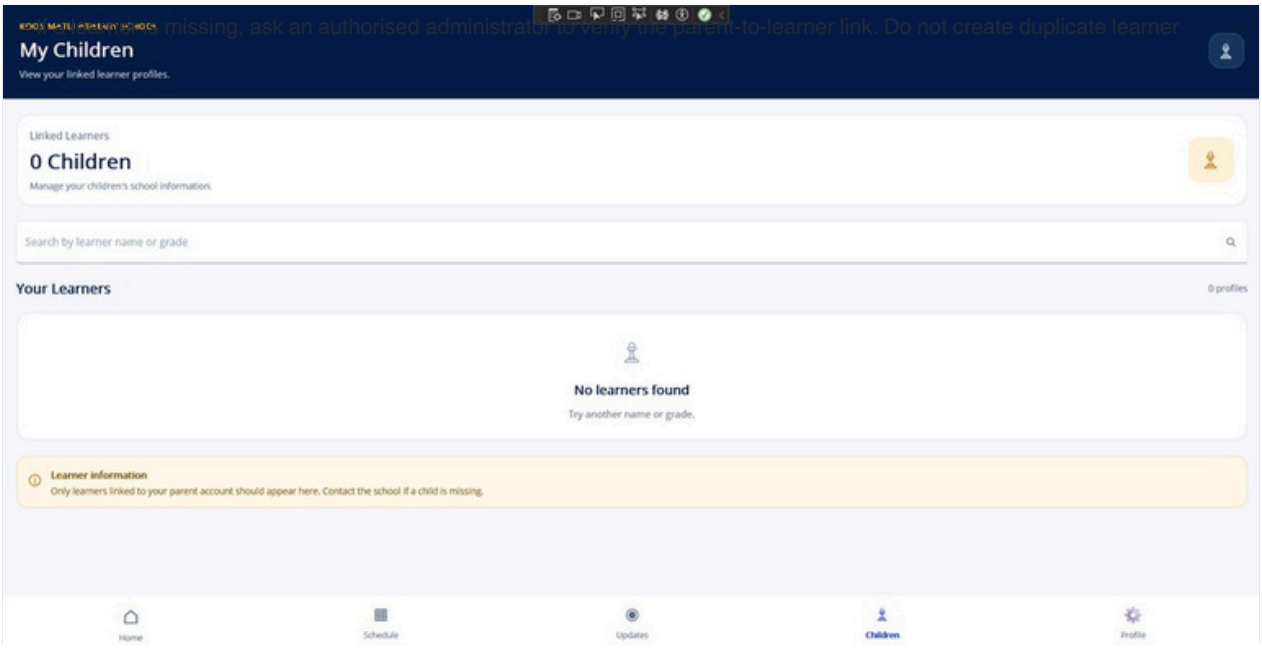

The Children page displays learner profiles linked to the signed-in parent's account. The wireframe shows a list of linked children and an Add Another Child action. records.

- Select Children from the bottom navigation.

- Review the learner profiles linked to the account.

- Select a learner to view the learner information available in the current build.

- Use Add Another Child only if the feature is available and the school has provided the required linking process.

PAGE 17 - PARENT FUNCTIONALITY

Child details and academic progress

The screen design illustrates a child details page with tabs such as Overview, Academics, Attendance and Homework, together with an academic progress summary. The exact information shown depends on the current implementation and the data available for the learner

- Open Children and select the relevant learner.
- Review the overview and the academic information available.
- Use the displayed tabs only where they are present in the current build.
- If the information appears incorrect, contact the school to verify the learner record.

PAGE 18 - PARENT FUNCTIONALITY

School fees

The screen design includes a School Fees screen with a term summary, fee status and fee structure. Use this page only if it is available in the current application build and the parent account is authorised to view it.

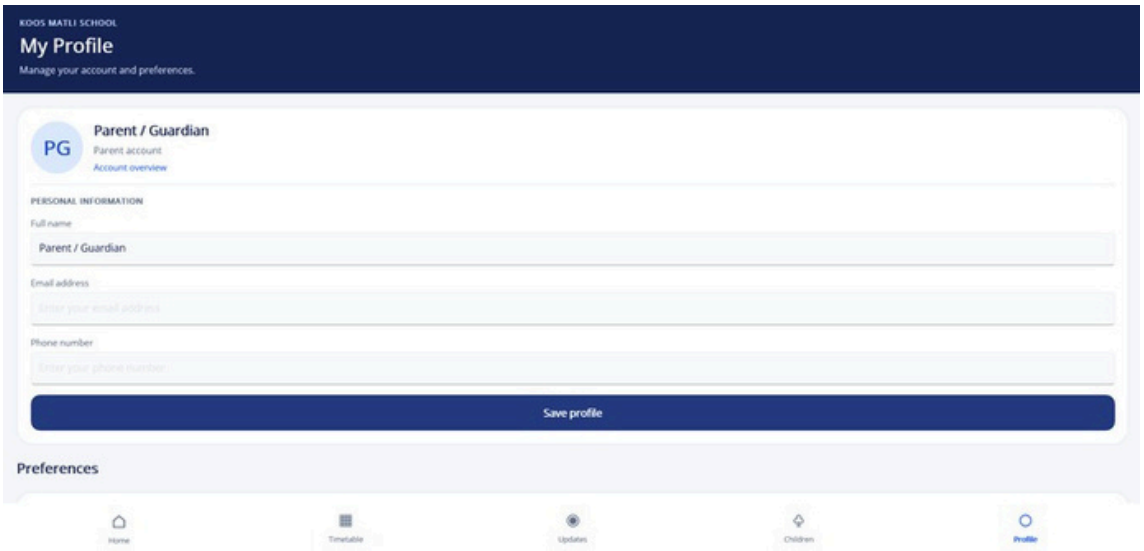

- Open the School Fees area if it is provided in the current parent interface.
- Review the term and fee information displayed.
- Check the payment status and outstanding balance carefully.
- Use any payment-history or payment action only if it is available and officially supported by the school.
- For fee disputes or corrections, contact the school office; do not assume that a displayed amount is a confirmed bank

PAGE 19 - PARENT FUNCTIONALITY

Profile and settings

The Profile page gives parents access to their account information and application preferences. The screen design includes notification settings, Data Saver Mode, change password and help/support options.

- Select Profile from the bottom navigation.
- Review the account information displayed.
- Open Settings or a preference only when you need to change it.
- Use the language setting to choose English, Sepedi or Setswana if the option is available here.
- Sign out when finished, especially on a shared device.

PAGE 20 - PARENT FUNCTIONALITY

Parent privacy and responsible use

Parents may have access to personal and learner information. Protect the account and avoid sharing screenshots or records with unauthorised people. Report suspected unauthorised access to the school.

- Keep login details private and use a strong password.

- Do not leave learner details open on a shared device.

- Avoid sending screenshots containing learner names, contact details or academic records. -

- Use only the information and actions made available to your account.

PAGE 21 - PARENT FUNCTIONALITY

Parent registration and account assistance

Parents can register through the application as described in the project documentation. If the account cannot be created or linked to a learner, the school may need to verify the account and learner relationship.

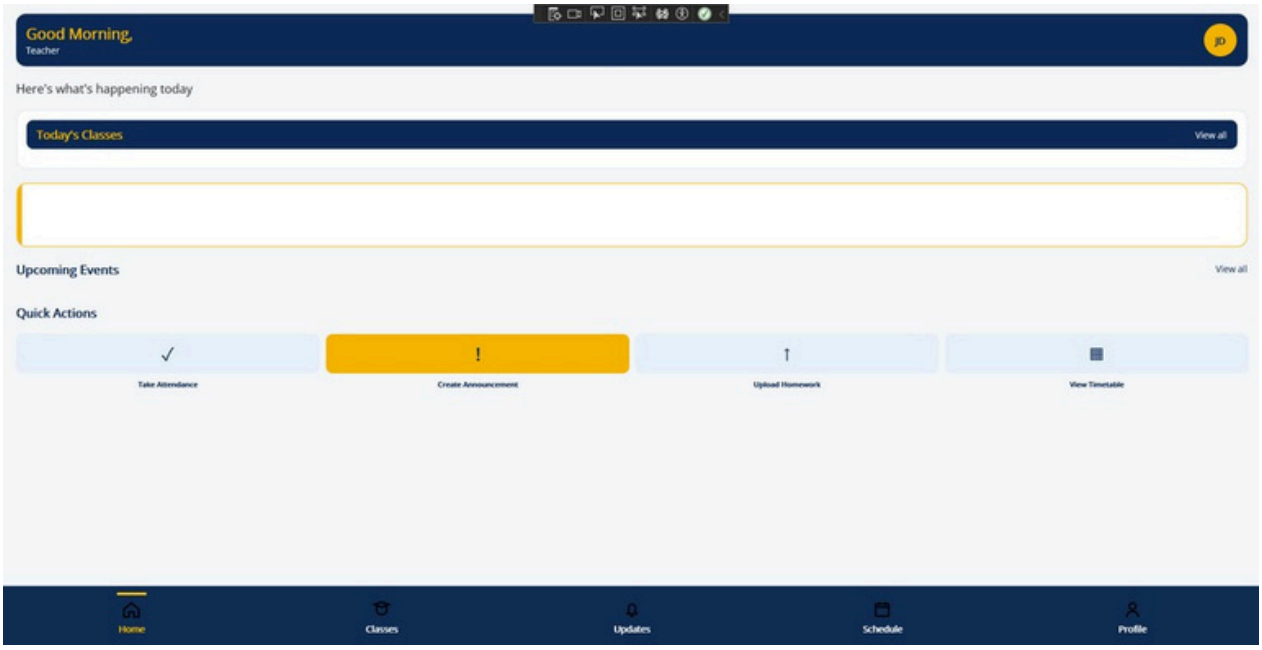

- Open Sign Up from the authentication screen.
- Complete the fields requested by the current registration form.
- Check the details before submitting.
- Follow the confirmation steps displayed by the app.
- If the account is created but no child appears, ask the administrator to verify the parent-to-learner link.

PAGE 22 - TEACHER FUNCTIONALITY

Teacher dashboard

The Teacher Dashboard is the teacher's home page. The screen design shows a greeting, today's classes, upcoming events and quick actions for creating an announcement and viewing classes.

- Sign in with the teacher account provided by the school.
- Review the classes and upcoming events shown on the dashboard.
- Use the main navigation to open Classes, Updates, Schedule or Profile.
- Use the Create Announcement quick action if it is available, or open Updates to create one.
- If the dashboard or role is incorrect, contact the administrator.

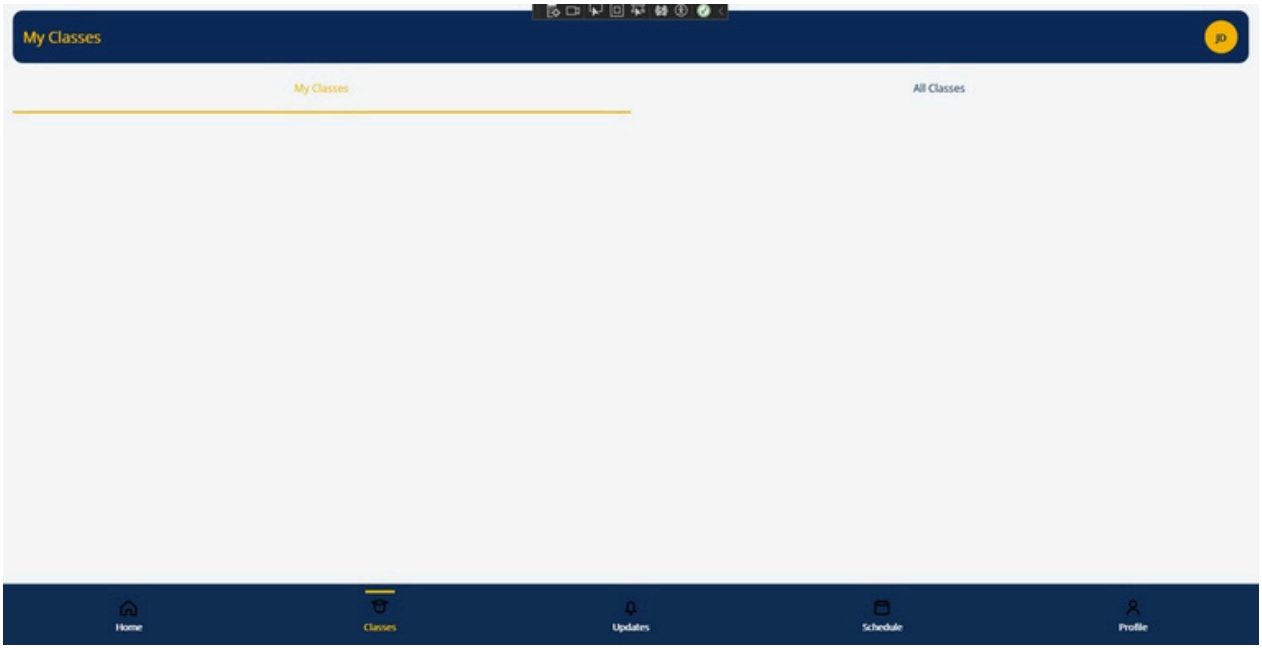

PAGE 23- TEACHER FUNCTIONALITY

My classes

The Classes page provides access to classes assigned to the signed-in teacher. The screen design Classes view with class cards and tabs for timetable and learners. shows a My

- Select Classes from the Teacher navigation.
- Review the classes assigned to your account.
- Select a class to open its class information if available.
- Use the page's tabs only where they are present in the current build.
- If an assigned class is missing, ask the administrator to verify the teacher's class allocation.

PAGE 24 - TEACHER FUNCTIONALITY

Class details

The screen design shows a class details page with tabs for Overview, Learners, Homework and Materials, plus a class timetable and summary. The exact details depend on the current implementation.

- Open Classes and select an assigned class.
- Review the class overview and timetable shown.
- Use Learners, Homework or Materials tabs if they are available in the current build.
- Only access information for classes assigned to your account.
- Report incorrect class information to the administrator.

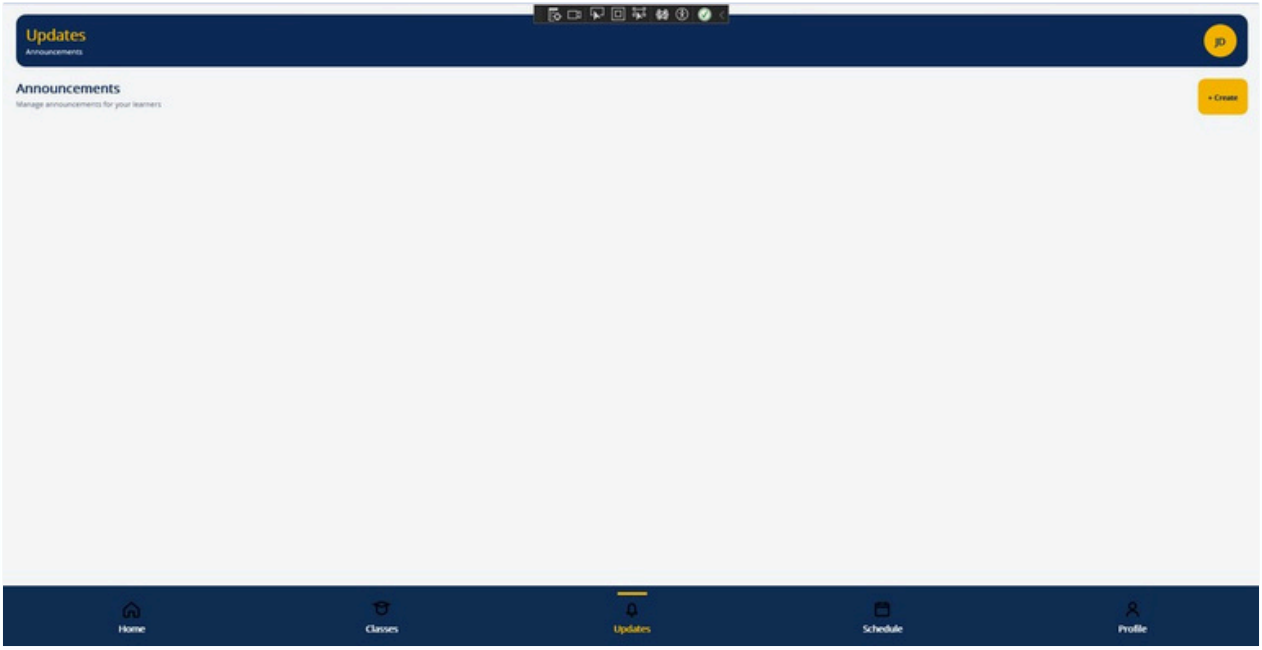

PAGE 25 - TEACHER FUNCTIONALITY

Updates and create announcement

Teachers can view school updates and create announcements for the appropriate audience. The screen design shows an Updates page with Create Announcement and My Announcements tabs, an audience selector, title, message and priority.

- Select Updates from the Teacher navigation.
- Review the announcements and updates available to your account.
- Choose Create Announcement to prepare a new notice.
- Select the intended audience, enter a clear title and message, and choose the priority where available.
- Review the announcementbefore selecting Publish.

Teacher updates and create announcement

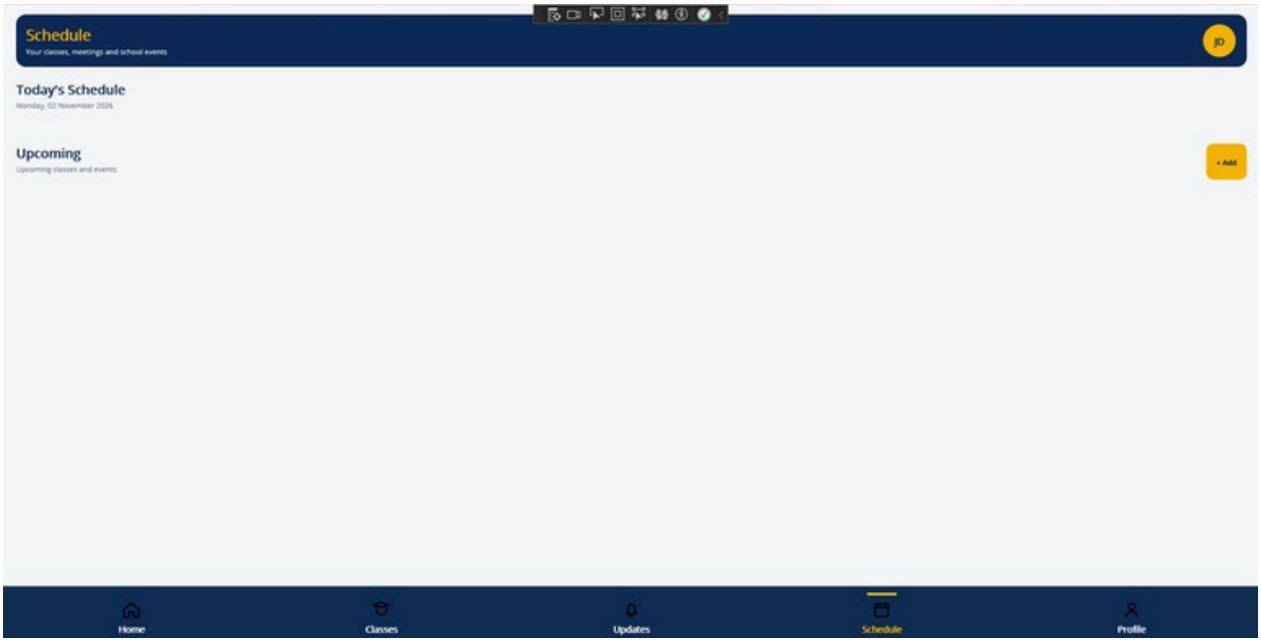

PAGE 26 - TEACHER FUNCTIONALITY

Teacher schedule

The Teacher Schedule page provides access to teaching schedules, school events and meetings. The screen design shows My Schedule, School Events and Meetings.

- Select Schedule from the Teacher navigation.
- Review the displayed teaching schedule.
- Switch between My Schedule, School Events and Meetings if those tabs are available.
- Check dates and times before relying on the schedule.
- Contact the relevant school coordinator if an entry is missing or incorrect.

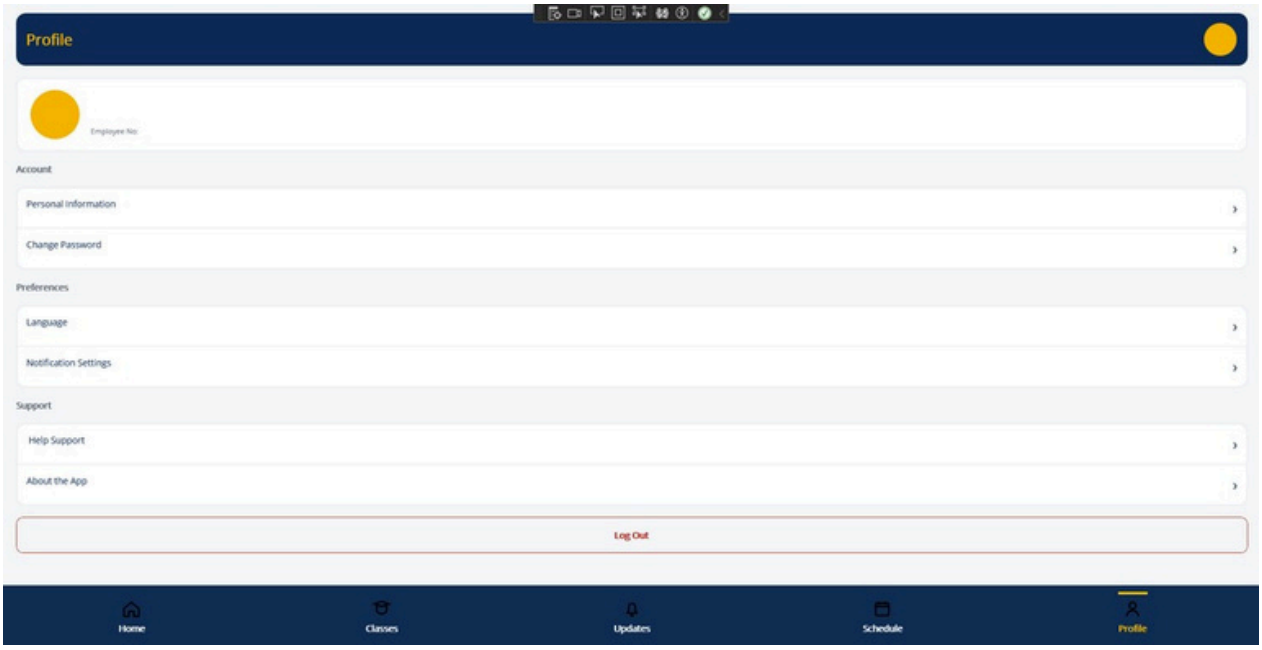

PAGE 27 - TEACHER FUNCTIONALITY

Teacher profile and settings

The Teacher Profile page provides access to account information and preferences. The screen design information, notification settings, Data Saver Mode, password change and help/support options. shows profile

- Select Profile or Settings from the Teacher navigation.
- Review the profile information shown.
- Use notification, data or password preferences only when available and necessary.
- Ask an administrator to update role or class assignments.
- Sign out after using the application on a shared device.

PAGE 28 - TEACHER FUNCTIONALITY

Teacher registration and account assistance

Teachers should publish only to the appropriate audience and within school communication rules. Teachers should not have permission to modify school fee information.

- Use the teacher account issued by the school.
- Create announcements only for the intended audience.
- Check dates, wording and priority before publishing.
- Access only assigned classes and permitted information.

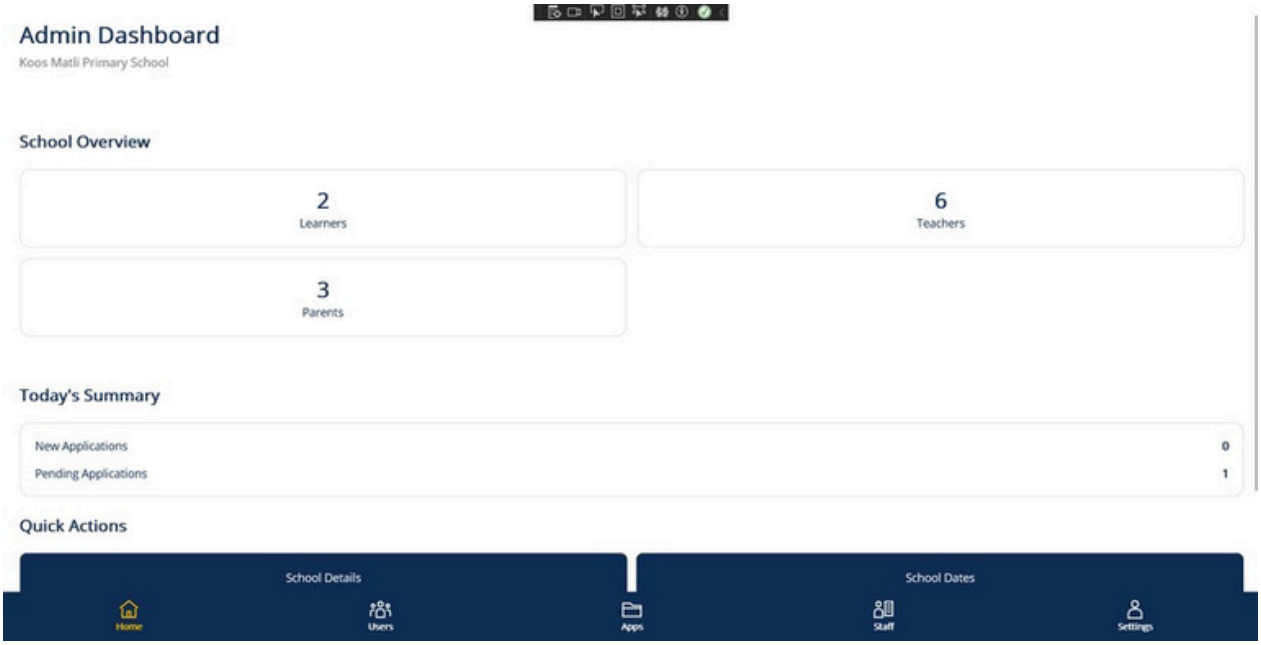

• Report unexpected access or incorrect permissions.

PAGE 29 - ADMINISTRATOR FUNCTIONALITY

Administrator dashboard

The Administrator Dashboard is the main landing page for administrative users. The screen design counts for learners, parents, teachers, applications and announcements, plus recent announcements. shows overview

- Sign in using the administrator account issued by the project team or school.
- Review the dashboard overview and recent announcements.
- Use the main navigation to open Users, Applications, School or Settings.
- Treat administrator access as privileged and keep the account secure.
- Use sample data for demonstrations.

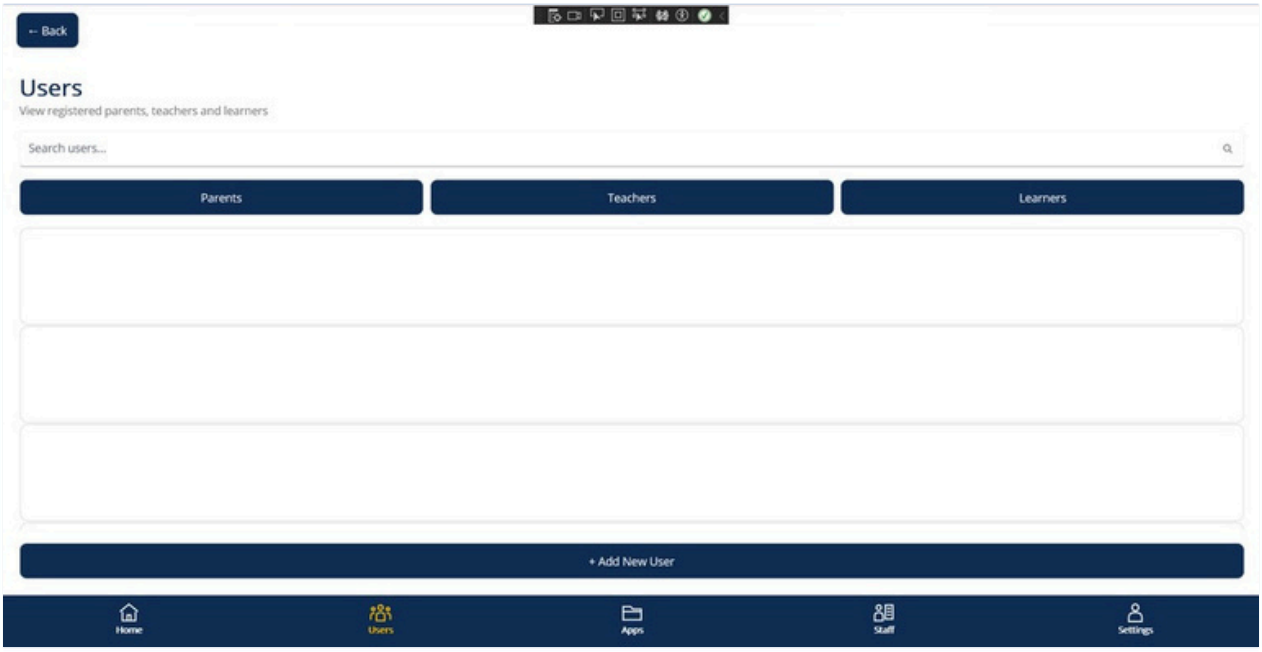

PAGE 30 - ADMINISTRATOR FUNCTIONALITY

User management

The Users page allows authorised administrators to manage application accounts. The screen design shows tabs for Parents, Teachers and Learners, a user list and an Add Parent action.

- Select Users from the Administrator navigation.
- Choose the relevant user category if tabs are provided.
- Review the user list and confirm the account before opening it.
- Create or update accounts only using the controls available in the current build and in accordance with school
- Check the assigned role and linked information before saving.

User management

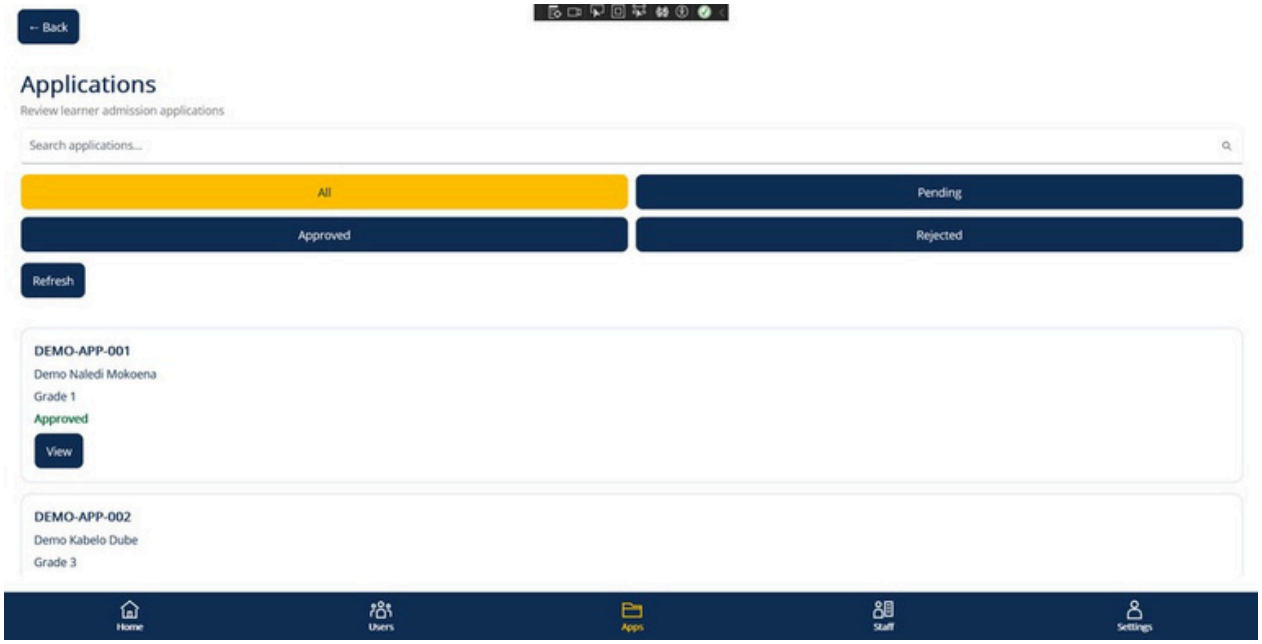

PAGE 31 - ADMINISTRATOR FUNCTIONALITY

Application management

The Applications page provides access to learner admission application information. The screen design application tabs or statuses such as New, Pending, Approved and Rejected. shows

- Select Applications from the Administrator navigation.
- Review the application list and status labels.
- Open the relevant application when a review is required.
- Use status or decision actions only if they are implemented and you are authorised.
- Check information carefully before recording an administrative decision.
- Keep applicant information confidential.

PAGE 32 - ADMINISTRATOR FUNCTIONALITY

School management

The School area provides accessto school information and content categories. The screen design Announcements, Timetables, Events, Documents, School Information and Gallery. shows

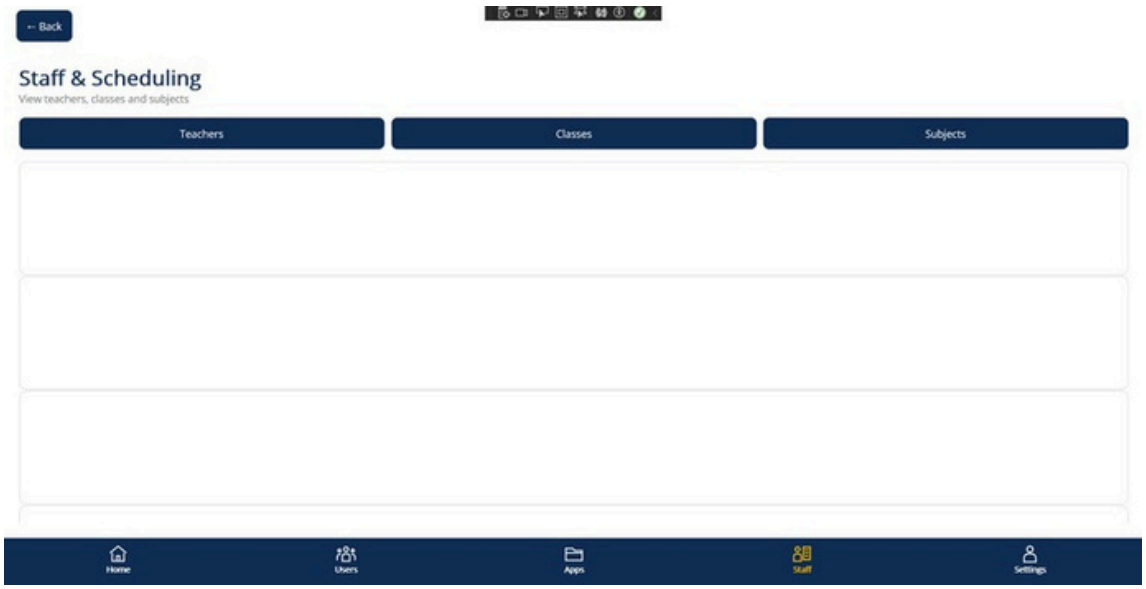

- Select School from the Administrator navigation.
- Choose the relevant school content category.
- Review existing information before making an update.
- Add or edit content only where the current build provides the relevant controls.
- Check titles, dates and wording before publishing.
- Verify the public-facing result where the website is connected to the same content source.

PAGE 33 - ADMINISTRATOR FUNCTIONALITY

Staff and class management

The screen design shows a Staff and Class Management page with Staff Profiles, Roles and Permissions, Departments, Classes, Subjects and Timetables. These areas should be used only where implemented in the current build.

- Open the relevant staff/class management area from School or the administrator navigation.
- Review the available categories.
- Select the relevant category to view the records available to your role.
- Make changes only when authorised and when the current build provides the relevant controls.
- Verify class and staff information before saving.

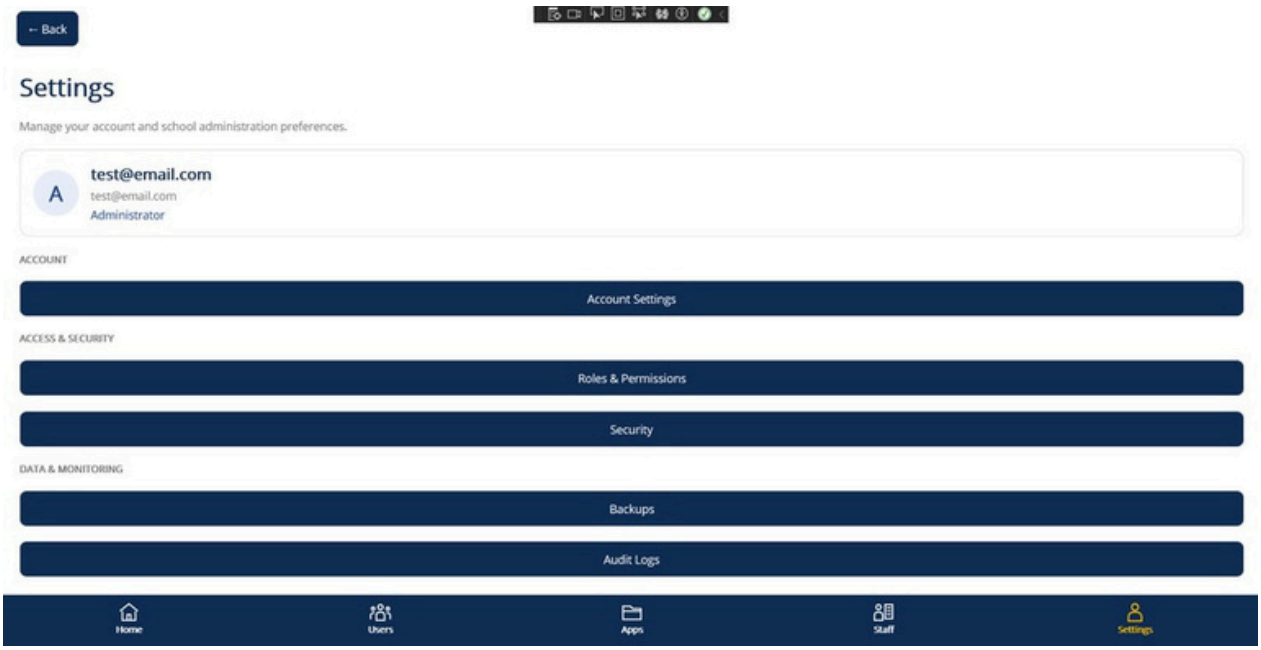

PAGE 34 - ADMINISTRATOR FUNCTIONALITY

Administrator settings

The Administrator Settings page provides access to administrative and application preferences. The screen design includes Account Settings, Security, Permissions, Notification Settings, Data Management and Audit Logs.

- Select Settings from the Administrator navigation.
- Review the settings categories available.
- Change only options covered by your responsibility and school approval.
- Ensure sensitive permissions remain restricted to authorised roles.
- Do not share administrator credentials or expose security configuration in screenshots.
- Sign out when administrative work is complete.

PAGE 35 - ADMINISTRATOR FUNCTIONALITY

Managing parent and learner links

Administrators may need to verify the relationship between a parent account and the learner profiles shown in the Parent app. Correct linking ensures that parents see the appropriate learner information.

- Open Users and locate the parent account.
- Confirm that the correct parent record has been selected.
- Use the linking workflow if it exists in the current build and follow the school's verification process.
- Confirm the intended learner is linked to the correct parent.
- Ask the parent to sign in again and check the Children page using a controlled test account.
- Do not create duplicate learner records as a workaround.

PAGE 36 - ADMINISTRATOR FUNCTIONALITY

Administrator security and privacy

Administrator accounts may access sensitive school information. The project documentation identifies authentication, role-based access, secure communication, input validation, credential protection and POPIA considerations as important security practices.

- Use an individual authorised administrator account.
- Check the selected user or record before saving changes.
- Do not share learner, parent or staff information with unauthorised people.
- Production communication should use HTTPS/TLS.
- Keep API keys and Firebase credentials out of source control and screenshots.

PAGE 37 - ADMINISTRATOR FUNCTIONALITY

Reviewing and maintaining school content

Administrators maintain relevant school information and public-facing content. Thewebsiteincludes About Us, Our Staff, Admissions, News and Announcements, Gallery, Find Us/Contact and School Calendar.

- Review the content category that needs attention.
- Use approved school wording, dates and contact information.
- Check content for accuracy before publishing.
- Use the current website or administrative workflow available in the build.
- Confirm the updated information is visible to the intended audience.

PAGE 38 - ADMINISTRATOR FUNCTIONALITY

Role permissions and restricted information

The application separates Parent, Teacher and Administrator experiences. Sensitive actions should be available only to authorised users. The project documentation specifically notes that teachers should not be able to modify school fee information.

- Assign each user the correct role.
- Review permissions before granting access to sensitive information.
- Do not share administrator credentials to bypass a missing permission.
- Report incorrect access or a role mismatch to the technical team.
- Test permissions with dedicated demo accounts before a public demonstration.

PAGE 39 - TROUBLESHOOTING

Reporting an issue and getting help

When reporting a problem, provide enough detail for the project team or school administrator to reproduce it without exposing personal or confidential information. information.

- Identify the area affected: website, Parent app, Teacher app, Administrator app or API.
- Describe what you were doing immediately before the issue occurred.
- Include the exact error message, date/time and device or environment.
- Attach a screenshot only after removing learner names, contact details, passwords, tokens and other personal
- Never send passwords, API keys, Firebase credentials or full learner records through email or chat.
